Professional Summary:

Web Developer with a strong foundation in Next.js, React, TypeScript, and JavaScript. Proven ability to learn and adapt quickly, demonstrated through personal projects, internships, startup roles and coursework. Possess good design implementation awareness and a keen eye for detail. Eager to contribute technical skills and a passion for coding to a dynamic development team, while continuing to grow and refine my abilities in a professional setting.

Skills:

- **Programming Languages:** JavaScript, TypeScript
 - **Frameworks and Libraries:** Next.js, React.js, Shadcn
 - **Styling:** Tailwind CSS
 - **Backend and Databases:** Firebase, Firestore
 - **Authentication:** NextAuth, Clerk Authentication
-

Formal Education:

- **Bachelor of Science in Computer Science:**
University of Benin, Benin-City, Edo State, Nigeria
2nd Class Upper graduate, Graduated: December 2023
-

Certifications:

- Pearson IT Specialist HTML5 Application Development
- Pearson IT Specialist HTML and CSS

- Pearson IT Specialist JavaScript
 - Pearson IT Specialist Python
-

Professional Work Experience:

- **Web Development Intern:**

Edo Innovation Hub, Benin-City, Edo-State

January 2022 - July 2022

- Gained experience in teaching web development to freshers.
- Assisted in the development and maintenance of web applications using JavaScript and React.js.

- **Frontend Engineer:**

Oyannow Logistics, Benin-City, Edo-State

September 2022 - February 2023

- Developed responsive front-end interfaces using React.js.
 - Integrated api to projects and gained experience in providing different levels of access in projects.
 - Worked closely with the backend team to ensure proper functionality implementation.
-

Projects:

- **SAAS Translator Chat App:** This is a massive SAAS build. It is a chat app that translates to over 10 languages. It uses technologies like Nextjs 14, Tailwind,Zod, Shadcn, Stripe, Next-Auth, firebase for language translation and data storage. Pages are protected and features are limited based on subscription plan.It is a complete build with every single button being active and working. NB: The stripe feature is currently in test mode. Hence, actual card details are not used.
- **Transport Dashboard:** The live web app for this has been discontinued. However, a video demo is still available. The dashboard uses technologies like React, Axios, createAsyncThunk and MUI. It interacts with an actual backend server and accepts three levels of users. A super admin, an admin and a normal user. Protected routes are used and a bearer token for axios calls also. It is also a CRUD app.
- **Dropbox clone:** This interacts with firebase and is essentially a CRUD app where files are stored. It uses clerk for authentication and also protects routes based on login status.Its design is also made seamlessly through the use of the modern UI technology, shadcn.

- **Ecommerce web app:** Built with Nextjs 14, this web app is meant to show proficiency in building ecommerce web apps. It uses dummy json for pulling data. It also uses redux toolkit for global state management and use the AppDispatch to pull related products data from the redux state. Active pages are the Home(shop) page, product page, cart page and checkout page.
- **Post Dashboard:** This is built on Nextjs and its main aim is to show the use of modern UI for quick and effective builds. The active pages are the Dashboard and Post pages. It also has an auth page. It uses shadcn as its main package. Other packages used are: Typescript, Recharts, React hook form and Zod. There is no existing backend on this project.
